Transforming Storytelling,
Together

ThisDay is a storytelling platform around history, art, culture, and heritage that lets masses access amazing stories from around the country. There are multiple formats that we support including but not limited to text, web stories, audio stories, and static visuals.

We at Ekank Technologies are dedicated to transforming storytelling, so that stories of history, art, and culture are not only more engaging and fun but also easily accessible. Simply put, people connect to stories and we connect stories to people!

BACKEND DEVELOPER INTERNSHIP

Task - Build Employee Leave Request System in Django with a relational database.

There will be two types of users:

- Employees - Employees can create/view requests for leave
- Admins - Admins can approve/disapprove leave requests by Employees.

Create the following APIs:

1. API to create leave requests from employee-only (not allowed to admins)
2. API to view all the leave requests for admins (not allowed to employees)
3. API to approve any leave request for admin (not allowed to employees)
4. API to discard any leave request for admin (not allowed to employees)
5. API to view all leave requests of an employee with their statuses (authenticated employee only)

- All APIs will have user token authentication.
- APIs to log in and register are not in the scope of this application.
- You can use Django admin to register users and get user tokens.
- The points mentioned above will be used to evaluate the assignment. Bonus will be given for any other cases left or not mentioned and are relevant to this application.

Please send the final code either directly over mail to hr@ekank.com in a .zip file or as part of a Github repository.
